

Removing Inflammation OCD Arthritis & Wind Puffs from Ankles & Fetlocks

Using the Leg Saver Therapy on all lame and compromised ankles/fetlocks you will be able to bring the joint back into balance and soundness quickly.

You must consider when dealing with Ankle/Fetlock issues that most of the time there is a problem in the rear whether it be the Hocks, Whirl Bone, Sacroiliac, Hamstrings or something else.

When the horse changes its gait for any reason usually pain there is a shifting of weight to the front legs which is the cause for most front lameness including Tendon Ligament and Joint Problems. These rear end problems must be addressed before you can achieve front end soundness.

Wind Puffs are one of the most irritating problems as the horse is not lame but the puffs are there. Wind Puffs are caused by rear end pain issues.

*If you want to do permanent damage to the joint, start by applying poultice to the joint regularly. **DO NOT DO THIS!***

We guarantee results in most cases when there are no chips or internal fractures.
